Project overview

Maven AI, a seed-funded LegalTech company, was hiring a product and operations leader as a foundational role. With their MVP close to launch, they needed someone to lead pilot delivery, shape the product roadmap, and make key calls on tooling and workflows. The brief called for a product leader with experience across AI/ML, API integrations, and the legal domain.

They partnered with us for our LegalTech track record and approach to positioning early-stage companies. We ran a targeted search, supporting outreach with a tailored briefing pack that brought Maven's proposition into sharp focus. Within days, they had a shortlist of five high-calibre profiles and went on to secure their ideal candidate in just 26 working days.

Completed assignments

Chief Product & Operations Officer

About the client

- ✓ Skillset required: AI & ML
- ✓ Headquarters: White Plains, NY
- ✓ # of employees: 2-10
- ✓ Relationship start date: 2025
- ✓ Total hires to date: 1
- ✓ Locations: USA

In the customer's words

"The candidate briefing pack they created for us did an excellent job articulating both the role requirements and the broader context of what we are building. The candidate acquisition strategy felt thoughtful and the quality of profiles presented was strong; all were relevant, well screened, and brought experience that closely matched the brief. Communication throughout the process was responsive and transparent. Their approach demonstrated a strong understanding of my company and its early-stage hiring needs — I couldn't be happier with the final result."
